

Drug-screening and identification of drug targets using NGS analysis

Objective

A Top 10 pharma required bioinformatics analyses for drug-screening and identify potential drug targets and their role in specific neurological indications

2.5 FTE

5 months

Methodology

Research institute, US :
Patient Cohort (CNS)

Identification of Data

Client:
Drug screening data & GWAS data

- Analysis
- Genomics
 - Microarray
 - Proteomics
 - Metabolomics
 - MEGENA analysis

Enrichment

Hyper-geometric test
GO term enrichment

Visualization

- Differential expression
- GWAS on module genes
- Box plots and heatmap

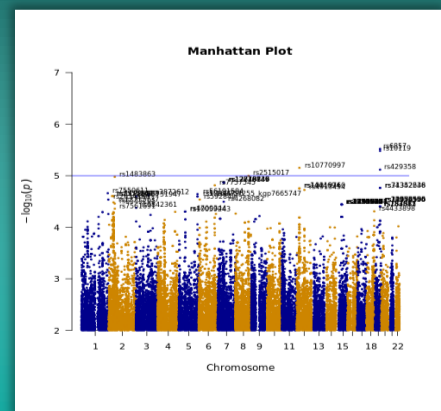

Outcomes

Elucidation of new targets for the group to initiate discovery programs

Enabling biologists to visualize large data sets, their associations and biological interpretation
