Where data means more

Electronic lab notebooks (ELNs) and lab information management systems (LIMS) consulting services

Efficient lab research projects require optimized software to ensure maximum output. Electronic Laboratory Notebooks (ELNs) and Laboratory Information Management Systems (LIMS) play an important role in productivity, accuracy, and recording. But choosing the wrong tool can hinder progress instead of helping, and traditional integration projects approaches can take years to complete. With our strategic ELN and LIMS consulting services, you can reduce your implementation process by up to 25% and be confident that your lab tools are working for you, not against you.

More efficiency, greater acceleration, better value

ELNs and LIMS help lab researchers and scientists manage data, simplify collaboration, and meet regulatory compliance standards.

If you're ready to optimize your lab informatics operations, our consultants help optimize your use of ELNs and LIMS, streamline your workflows, and achieve your digital transformation goals.

Our services

Business consulting and scientific advice

We offer a wide range of custom consulting and advisory services in lab informatics, including:

Strategic consulting

We assess your current lab informatics systems and processes to identify areas for improvement, recommend new technologies or upgrades, and help you create your digital transformation strategy.

Workflow optimization

We work with you to optimize your lab workflows, increasing efficiencies and eliminating gaps through automation.

ELN/LIMS implementation and delivery

We offer specialized application implementation services to life sciences organizations, including:

Implementation of commercial-off-the-shelf (COTS) software

We implement a wide range of COTS scientific applications, including ELNs, LIMS, and scientific data management systems (SDMS).

Customization

We customize scientific applications to meet your specific requirements, ensuring that they are tailored to your business processes and workflows.

Integration

We integrate applications with your existing IT infrastructure, including laboratory instruments, data repositories, and other systems.

Training and support

We provide training and ongoing support for your scientific applications, ensuring your team is able to operate them effectively.

Program and project management services

Program planning and execution

We develop detailed program plans, including timelines, budgets, and resource allocation, to ensure successful program execution.

Program monitoring and control

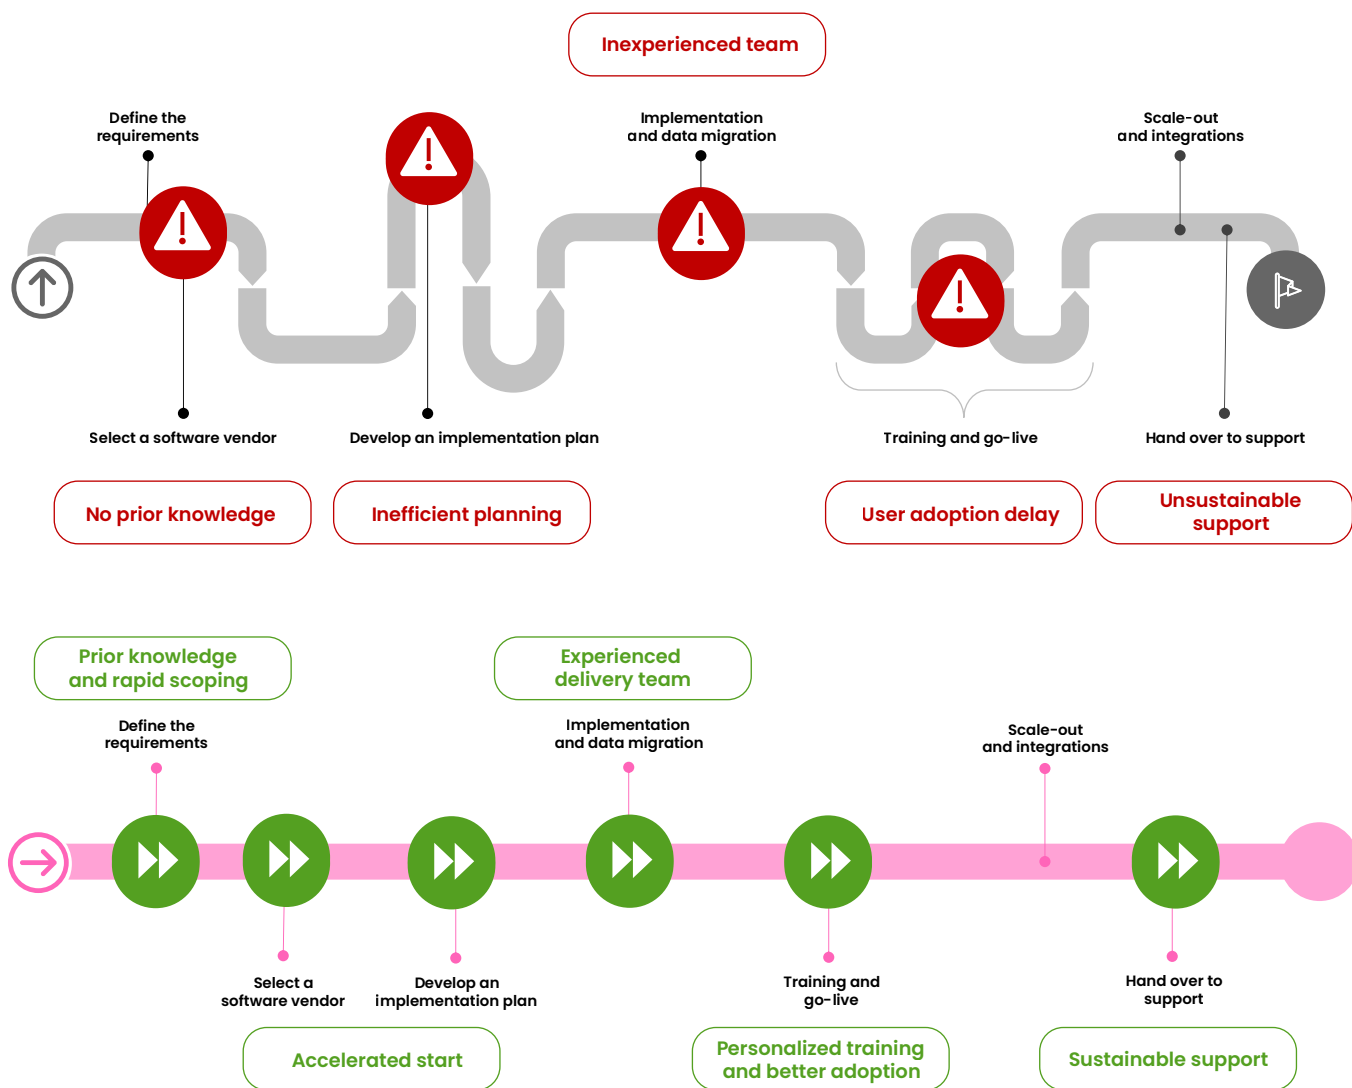

We monitor program progress and performance, identify issues, and implement corrective actions to ensure that the program is delivered on time, within budget, and to the desired quality standards.

Governance

We establish governance structures to ensure effective decision-making, clear communication, and accountability across all projects in the program.

Our approach

Why Excelra?

Experienced professionals

Our certified project and program managers have years of experience managing projects of varying sizes and complexities through waterfall, agile, and hybrid frameworks.

Customized solutions

We work closely with our clients to develop customized project and program management solutions that meet their unique needs.

Scientific knowledge

We're scientists like you, so we understand your data and know how to get the most from it. We also know how valuable your time is, so we'll take care of the things that slow you down while you focus on research.

Whether you're starting your digital transformation, optimizing your lab processes, or need to extract more value from your lab data, we can help. We integrate domain knowledge with technology solutions, and we know how to get the most from ELNs and LIMS tools in a laboratory environment.
